

# Syntax (Klein)

KL  
01

- « ...different ontology languages often use different syntaxes »  
  
« For example, to define the class of chairs in RDF Schema (Brickley and Guha, 2000), one uses `<rdfs:Class ID="Chair">`. In LOOM, the expression `(defconcept Chair)` is used to define the same class. »
- « In this simple case, a rewrite mechanism is sufficient to solve those problems. »
